1. Drive version instructions

1.1. directory structure

```
├── script
│   ├── chat.c
│   ├── init.gprs-pppd
│   ├── ip-down-ppp0.c
│   ├── ip-up-ppp0.c
│   └── The results of the source file compiled
        ├── chat
        ├── ip-down-ppp0
        ├── ip-up-ppp0
        └── readme.txt
└── so
    └── Android4.x
        └── libreference-ril.so
└── userguide
    ├── Android system RIL adaptation user reference -V0.8.pdf
    └── Additional instructions .pdf
```

1.2.Document describing

Driver version document describing

/script	Phone script
/so	To transplant the ril library
/userguide	Use the reference documents

The document instructions : The Green part is the code of increase,
the red part is reducing code.

2. Add the kernel module

2.1.Add the driver

The add of Module driven need to configure android kernel,
configuration method is as follows:

```
cd kernel/allwinner/common/  
make ARCH=arm menuconfig  
  
device drivers--->usb support--->usb serial converter support
```

Selected the following components :

USB driver for GSM and CDMA modems

2.2.Add equipment VID and PID

Modify the kernel source file option.c

(Path:kernel/allwinner/common/drivers/usb/serial/option.c)
diff --git a/kernel/allwinner/common/drivers/usb/serial/option.c
b/kernel/allwinner/common/drivers/usb/serial/option.c
index 87fcb74..c155329 100755

```

{ USB_DEVICE(OPTION_VENDOR_ID,
```

note:

0 x19d2 for ZTE vendor ID

0 x0117 for MF210V2 device ID

The above ID to be decided according to the specific module, different module ID.

2.3. Add the PPP components

Ril drive networking layer using the PPP protocol to create a data link, so you need to support for the PPP protocol in the kernel configuration. Configuration as follows:

```
cd kernel/allwinner/common/
make ARCH=arm menuconfig
device drivers-->network device support-->ppp support
```

Selected the following components :

```
ppp filtering
ppp support for async serial ports
ppp support for sync tty ports
```

```
ppp deflate compression
ppp BSD-compress compression
```

3. Integrated driver file

3.1. Integrated dial scripts

3.1.1. Copying files

Copy chat, ip-down-ppp0, ip-up-ppp0, libreference-rl1.so into
..../device/third_part/zte (need to create zte).

3.1.2. Packaging file into the system

Modify the device/allwinner/cubieboard/cubieboard.mk

```
diff --git a/device/allwinner/cubieboard/cubieboard.mk
b/device/allwinner/cubieboard/cubieboard.mk
index 860e2d3..26493c8 100755
