After opening the following interface

3.3. Set up the PHONENIXCARD

After finish the installation, click on the record, until reality as the following pictures means a successful.

4. Start the system in the TF card on board

Put completed TF card to the board card slot

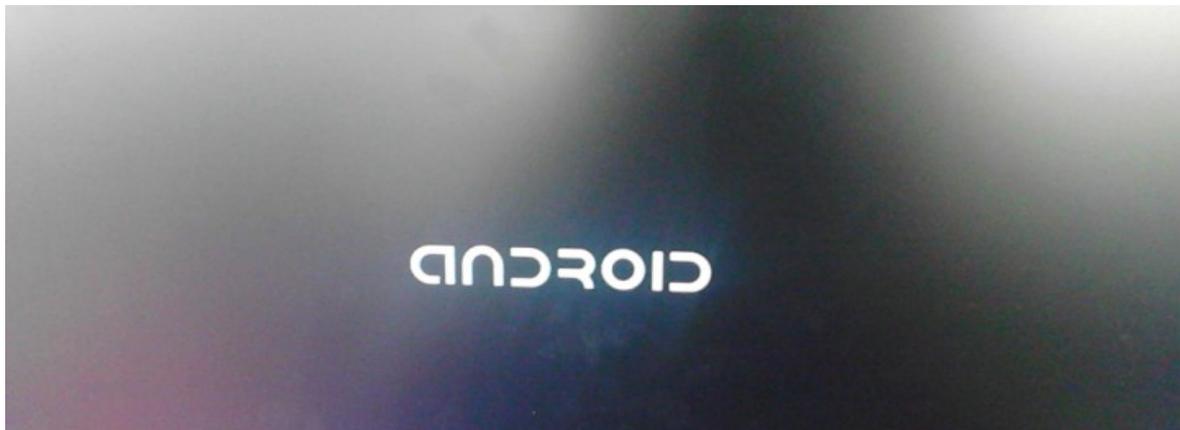

(above or below the card slot is ok, but please read the notes in the back of the concrete difference)

4.1. Insert cubieboard2 - dualcard card slots

(note: the card slot can be up and down), connected to the monitor

4.2. The android system logo of startup

5. system power on

In accordance with the above steps to complete the brush and power on. After the system starts to experience the perfect experience of Android Cubieboard2 system.

note:

- 1 .when the card with installed boot image of CARD2 insert CARD0 or card with installed boot image of CARD0 insert CARD2,system will not start.
2. When two card slots on the TF card, TF card is installed in the corresponding boot image, electricity boards, CARD0 (at the top of the card slot on the board) in the system will start, and CARD2 (at the bottom of the card slot on the board) will be treated as data storage card is identified.
3. When two card slots on the TF card, a card installed boot image for card slots, others a ordinary CARDS, then the system can start normally, ordinary card were used as the data memory card will be identified.
